

Working together to shape the future of evidence for HTA and Reimbursement

A cross-industry community helping statisticians generate, evaluate and communicate robust evidence for HTA.

Sutish Badhan, KuMarketAccess; Min-Hua Jen, Eli Lilly; Orlando Dohring, Novartis; Arthur Allignol, Daichii Sankyo Europe; Katrin KUPAS, MERCK KGaA, Darmstadt, Germany – on behalf of the EFSPI HTA SIG

WHY HTA MATTERS MORE THAN EVER

- The JCA needs to fulfill the HTA needs of all 27 EU member states with tight timelines in parallel to the regulatory timelines
- Differences in requirements for national HTA decisions can create challenges for evidence generation and alignment
- Collaboration and open scientific exchange are key to delivering consistent, transparent and trusted decisions for patient access

WHAT THE SIG ENABLES

Connect statisticians working in HTA
Share and co-develop HTA statistical best practices.

Foster dialogue and common understanding of the role of the statistician for HTA across industry, academia, regulators, payers and HTA stakeholders.

Influence methods & policy
Bring collective HTA statistical expertise into methodological and policy discussions.

Educate & raise awareness
Build capability around the importance and applications of HTA statistics.

A neutral forum where statisticians discuss on emerging HTA methods and share practical experience.

WE NEED YOU FOR DISCUSSIONS!

? What level and type of evidence are most critical for HTA decisions in your context?

? How can real-world and synthetic data complement traditional evidence?

? What are the key challenges in aligning submissions across regulatory and HTA agencies?

? Which methodological gaps limit confidence in current evidence for HTA?

? How can uncertainty be communicated and incorporated in HTA decision making?

? What would increase acceptance and trust in new data sources and methods?

WHAT WE WORK ON – SUBTEAMS

Treatment Switching:
Practical guidance for adjusting Time-to-event outcomes for treatment switch and developed accompanying open-source code repository.

German Subgroup:
Monitor, discuss and interpret the methodological & regulatory developments adopted in the German HTA landscape, with a focus on the IQWiG & G-BA benefit assessment.

AI Subteam:
Share overview of guidelines on AI use and tools to be used in HTA -focus on augmenting HTA workflows while preserving statistical judgement, validation and accountability

JCA Subteam:
Cross-industry forum on multiple PICOs, evidence synthesis, ITCs, pre-specification requirements, multiplicity, subgroup analyses, evidence certainty, statistical reporting, and dossier

PRO Subteam:
Advances PRO methodology and methodological thinking in HTA, through cross-industry collaboration, to strengthen the impact of PROs in healthcare decision-making.

Training Subteam:
Develops and delivers webinars, educational resources, and practical guidance to advance the understanding and application of statistics in HTA

CEM Subteam:
Discuss utilization of statistical methods in HTA & provide practical recommendations and guidance to address the associated challenges from a statistician's perspective.

WHY JOIN AS ACTIVE MEMBER

- Help set priorities for future SIG work
- Contribute to practical guidance and case examples
- Exchange lessons learned across companies
- Increase the visibility of HTA statistics
